

To whom it may concern:

This website is the official platform for the distribution of extended abstracts submitted to "The 6th IASPEI/IAEE International Symposium: Effects of Surface Geology on Seismic Motion"(ESG6) held in Japan in 2021 under the LOC of ESG6, Japan Association for Earthquake Engineering (JAEE).

To access the extended abstracts, download and extract **Extended_abstracts.zip** and visit pages 2 to 6 of **1_booklet_ESG6.pdf**, where active links to the abstracts can be found.

Please be informed that abstracts without active links will **NOT** be published at the authors' request.

When citing these extended abstracts presented during the ESG6 Symposium, please refer to the example provided:

Kawase, H. (2021). History of Our Understanding on the Effects of Surface Geology on Seismic Motions: Can We See a New Horizon?, Keynote lecture, The 6th IASPEI/IAEE International Symposium: Effects of Surface Geology on Seismic Motion, August 30-September 1, 2021, Paper ID: ESG-K01, <https://www.jaee.gr.jp/en/wp-content/uploads/2024/06/ESG6-EXT.html>

Kindly note that the extended abstracts were **NOT** peer-reviewed.

Initially, we refrained from distributing them on the website accessible to robots to prevent duplicate submissions to peer-reviewed journals. However, due to global demand, we have decided to commence distribution after two years. Authors are strongly encouraged to refer to the extended abstracts when using the presentation material in ESG6 to prevent problems with duplicate submissions.

Disclaimer:

The copyright of each extended abstract belongs to its respective authors. While we currently have no intention of discontinuing this distribution channel, JAEE reserves the right to terminate the website's accessibility at any time in the future.

Thank you for your cooperation and understanding.

Best regards,

Sadanori Higashi

Former secretary of the LOC of ESG6
